

Installing template drawings

Before the installation

- Open the ELITECAD configuration
- To get the right path for the templates click "[...]" under "project templates".

- Go to ELITECAD project list on your computer (by default under "Local Disk" -> "ELITECAD").

- Create a new folder "templates14" and choose it as your path for your project templates.

Download the templates

- Download the zip folder from the ELITECAD website at <https://en.elitecad.eu/downloads>.
- Save it in the "templates14" folder you just created before.
- Extract the ZIP folder and save the drawings without folder structure in the directory.

Creating your own templates

- To create your own project template, save the corresponding project with the new function "Save for transfer" under the folder "templates14".

Using project templates

- Start ELITECAD and go to the tab "Project templates" in the window "Welcome to ELITECAD!".
- Choose an appropriate project, assign new project information and you're ready to start.
